

# RESPONSIVE BASICS

## MEDIA QUERIES

---

```
@media screen and (max-width: 600px) {  
  .hamburger {  
    display: block;  
  }  
  footer li {  
    flex-basis: 100%;  
  }  
}
```

## STEPS TO ACHIEVE MULTI-COLUMN LAYOUT:

---

- ☐ HTML: Make sure each column has wrapper around it in your HTML
- ☐ HTML: Give the columns wrapper (the flex container)
- ☐ CSS: Add display: flex to flex container
- ☐ CSS: Give each column flex-basis (width) in percentages
- ☐ CSS: Use justify-content on flex container to determine how columns are distributed.

## DISPLAY:

---

<b>inline</b>	<i>Make block-level element act like inline element.</i>	<b>display: inline;</b>
<b>inline-block</b>	<i>Make block-level element flow like inline element, while retaining width, height, padding, and margin.</i>	<b>display: inline-block;</b>
<b>block</b>	<i>Make inline element act like block-level element</i>	<b>display: block;</b>
<b>none</b>	<i>Hide element from the page.</i>	<b>display: none;</b>

## FLEX CONTAINER PROPERTIES

---

<b>display</b>	<b>flex</b>
<b>flex-wrap</b>	<b>wrap, nowrap</b>
<b>justify-content</b>	<i>flex-start, flex-end, center, space-between, space-around</i>

---
